AUGYVA STARTS THE FIELD WORK ON THE YASINSKI PROPERTY, JAMES BAY, QUEBEC

May 1st 2006 – Augyva Mining Resources inc. ("AUGYVA") TSX-V : AUV, announces that exploration work have started April 26th 2006 on the Yasinski property (118 claims covering an area of 2288 hectares). This complementary program consists of line cutting, soil geochemistry, geophysics, prospection, mapping, trenching, outcrop stripping and sampling followed up by diamond drilling on priority targets.

In 1996, previous exploration work, grab samples (\approx 2,5 kg per sample) were collected on two mineralized zones (Figure 1). They revealed the following herebelow significant results :

- 1) Silicified ESE-WNW mineralized zone located at the contact of gabbro-amphibolite / metasediment (Ligne 20N / 300W) :

Sample No.	Au (g/t)
YAS-154	16,12
YAS-155	34,28 (cut)
YAS-156	34,28 (cut)
YAS-157	18,47
YAS-158	8,52
YAS-159	9,65

- 2) Volcanic chimney zone (Ligne 22N / 390W) consisting of silicified intermediate to mafic tuffs :

Sample No.	Au (g/t)
RADN-01	1,23
RADN-02	5,28
RADN-05	8,81
RADN-09	16,52
RADN-23	5,21

The mineralization is most often associated with sulfides (1-5% As; 3-5% Py; 3-8% Po; tr-3% Cpy) with local quartzcarbonate veins and veinlets.

From one to another, the auriferous zones are spaced by 200 metres. They will be explored and defined in more detail this summer. The mineralizations are located within and nearby the contact of the Menarik Lake Ultramafic Intrusive Complex. Several other occurrences were observed in the past on the property. They will also be defined and evaluated for their silver, copper, nickel, platinum group element, chrome and cobalt content.

The property is easily accessible by vehicule and the Trans-Taiga route runs across it's southern part

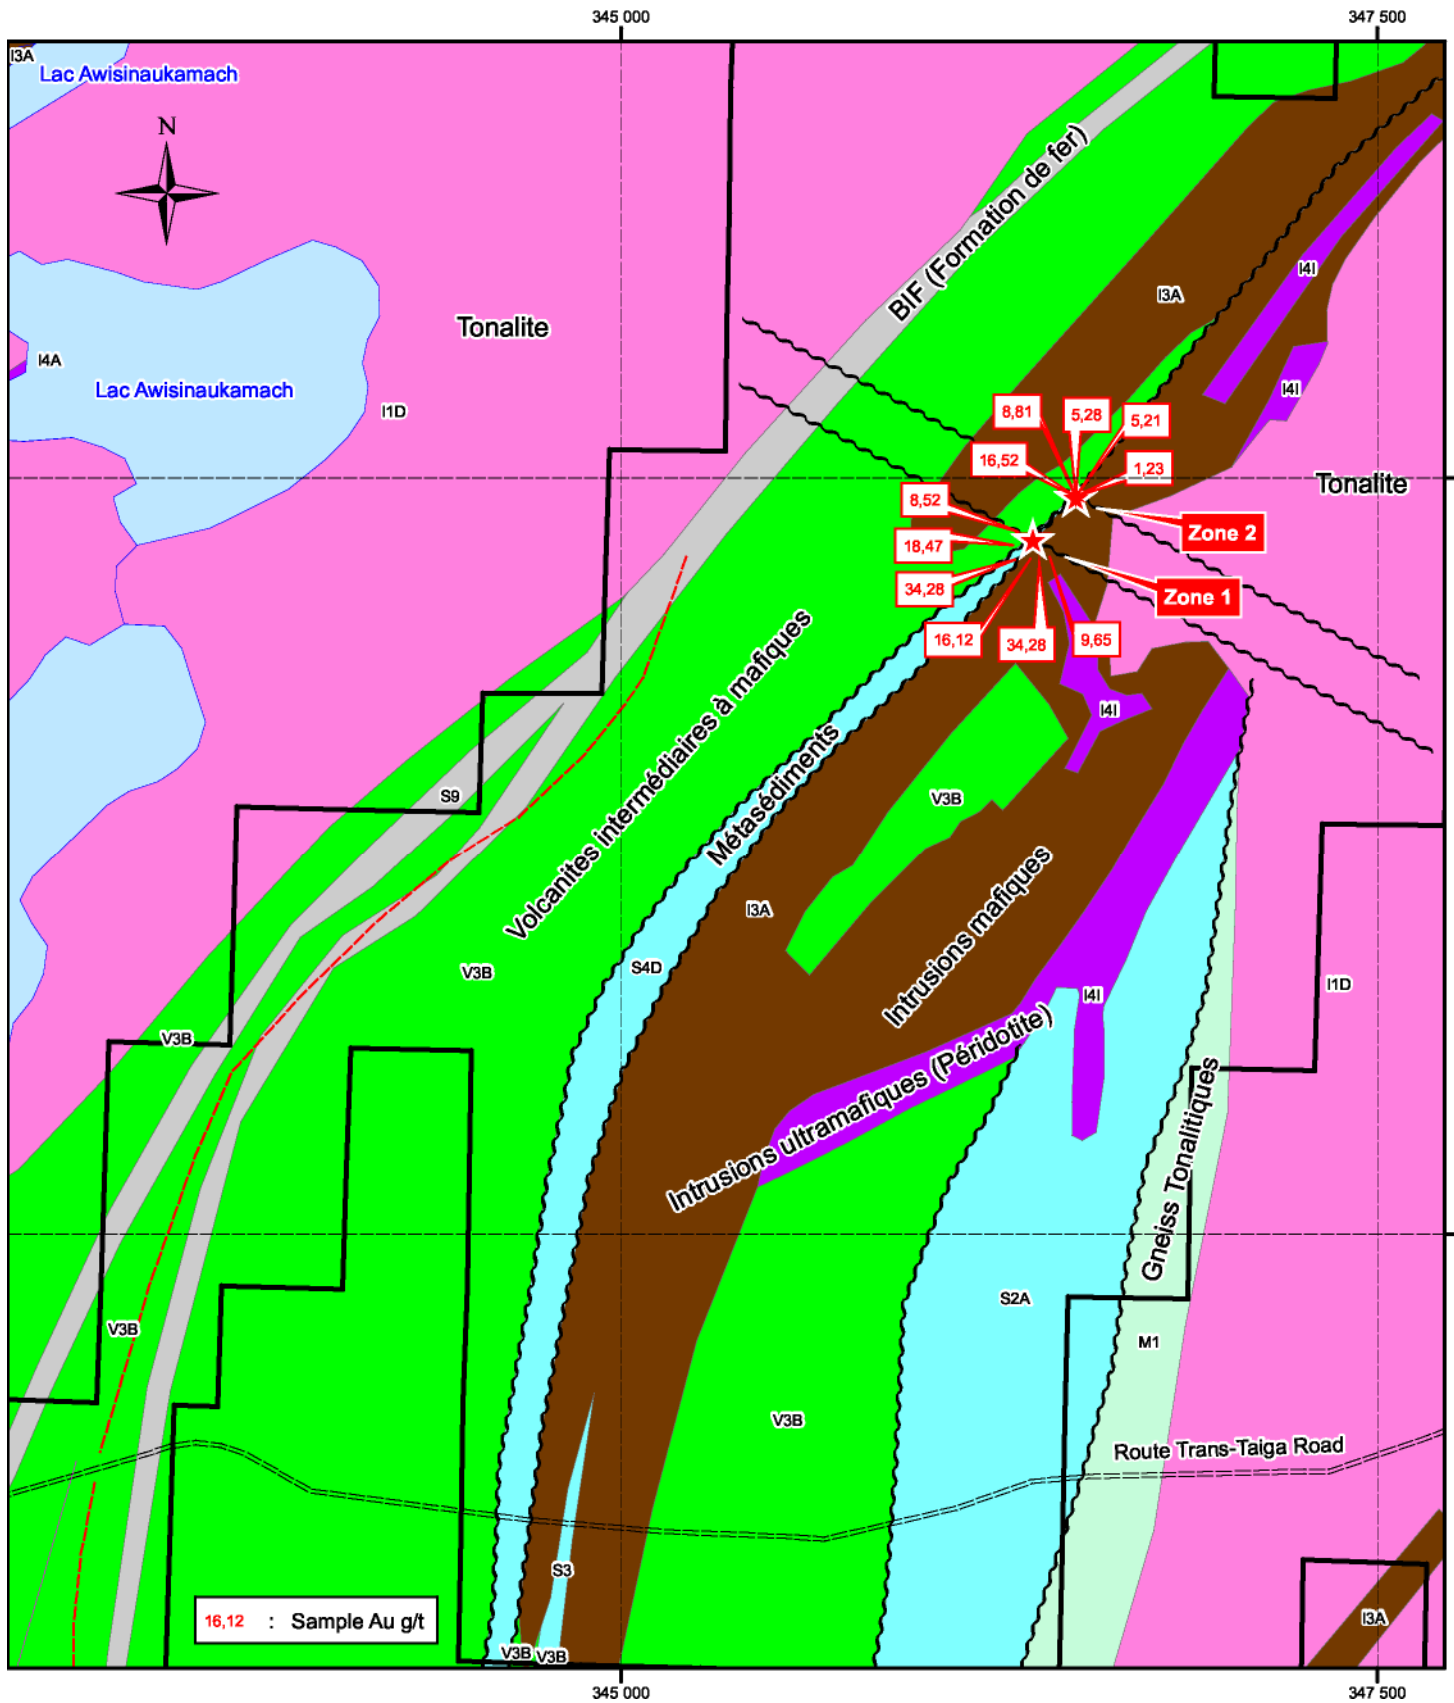

This press release was written and revised by George-Yvan Gagnon, professional geologist (OGQ) and fulfills, the requirements to be a qualified person for the purpose of National Instrument 43-101. Augyva is a mineral exploration company witch is actively exploring favorable metallogenic belts in James Bay and Abitibi, Québec. Augyva has 16,528,922 issued shares and a current market capitalizations of about \$10,082,642.

Augyva holds 100% interests on his gold and polymetallic properties of Yasinski and Kali (Opinaca), and on his Duncan iron deposit in James Bay area, and holds 100% interests on his Malartic and Senneville properties in Abitibi.
