AUGYVA HAS COMPLETED THE FIRST PART OF A SAMPLING CAMPAIGN

June 26, 2006 – Radisson (Quebec) – **AUGYVA MINING RESOURCES (TSX Venture : AUV) (the « Company »)** is pleased to announce that it has undertaken a lithochemical sampling campaign (160 samples) on its Yasinski property (25% on the central part and 10% on the northern part). Samples have been sent to ALS Chemex laboratories in Val d'Or for analysis (Au+32 elements+Hg). First results should be available within three (3) weeks. Samples are representatives of several potentially mineralized lithofacies (shear zones, smoky quartz, intermediate silicified and pyritized tuffs and amphibole-rich zones).

In addition, a pedochemical (humus) sampling is in progress in the central part (completed at 80%) and on the northern part (completed at 50%) of the Yasinski property. First results should be available within eight (8) weeks.

On the Duncan property, lithochemical samples have been taken using the channel sampling method (18 metres) and will be sent shortly to ALS Chemex laboratories in Val d'Or for oxide (ME-XRF06) and sulfur (S-IR08) analysis, and for metallurgical testing at COREM in Quebec. Writing of a geological report is in progress.

For the Kali (Opinaca) property, the Company will start a lithochemical and pedochemical (humus) sampling campaign around mid-July. These surveys should lead to a better understanding of the nature and extent of the known Au-Cu mineralization within volcanosedimentary rocks and the tonalitic stock.

Company Profile : Augyva is a mining exploration company which is actively exploring favorable metallogenic belts in James Bay (Yasinski - 100%; Kali – 100%; Duncan – 100%) and Abitibi (Sennerville – 100%; Malartic – 100%), in Quebec. Augyva has 17,528,922 issued shares and a current market capitalizations of about \$16,301,897.
