**AUGYVA REPORTS FURTHER HIGH GRADE GOLD GRAB SAMPLES RESULTS ON ITS 100 % - OWNED YASINSKI PROPERTY, IN JAMES BAY, QUEBEC**

---

**RADISSON, August 31, 2006 - Augyva Mining Resources Inc. (TSX-V: AUV) (the "Company")** is pleased to announce that, further to the Company's news release dated August 23, 2006, further high grade gold results have been received for its 100 % - owned Yasinski property, 80 km North of Eleonore gold discovery area, in James Bay, Quebec.

In May 2006, grab samples were collected to evaluate the potential in gold and base metals of Yasinski property. A silicified ESE-WNW mineralized zone located at the contact of gabbro-amphibolite / metasediment was sampled. The mineralization is most often associated with sulfides (1.5% Arsenic; 3.5% Pyrite; 3 to 8% Pyrrhotite; and, from trace to 3% Chalcopyrite).

Field observation from prospecting work indicates that the thickness at the contact (gabbro-amphibolite/metasediment) is from few metres to 16 metres and the mineralization may extend over 300 metres on-strike. The grab samples were shipped to ALS Chemex, an internationally recognized assayer, for fire assays and I.C.P test. Augyva recently received the following significant gold and silver results:

**YASINSKI CENTRE PROPERTY (5 KM LONG STRIKE)**

Sample No.	Localization	Au (g/t)	Ag (g/t)
Ysn 506-33	L19+00N, 3+00W	17.00	1.20
Ysn 506-31	L19+75N, 3+00W	6.33	7.70
Ysn 506-30	L20+50N, 3+35W	28.90	195.00
Ysn 506-150	L20+40N, 3+00W	21.00	42.50
Ysn 506-2	L22+25N, 3+00W	4.58	1.50
Ysn 506-9	L25+75N, 9+00W	4.21	6.40

The grab samples assayed from 0.11 to 0.84 ounce of gold per ton (28.90 g/t). All results are located in the center of Yasinski property. Geophysics and drilling will be performed during the upcoming year on priority targets.

Results from base metals grab samples are presently being studied and will be released shortly. Furthermore, numerous grab samples coming from pedogeochemical and lithogeochemical surveys for Yasinski property (> 550) and Kali property (>380) are presently being assayed, with results expected shortly

The technical evaluation NI 43-101 for the Yasinski property is in progress and should be ready in November.

This Press release was written and revised by Georges-Yvan Gagnon, professional geologist (OGQ) and fulfills the requirements to be a qualified person for the purpose of National Instrument 43-101. Augyva is a mineral exploration company which is actively exploring favourable metallogenic belts in James Bay and Abitibi, Québec. Augyva has 18,628,922 shares issued and a current market capitalization of about \$19,560,368.

**Augyva Mining Resources** holds 100% interests on his gold and polymetallic properties of Yasinski, Kali (Opinaca), and on the Duncan Lake iron ore deposit in James Bay. The Company also holds 100% interest on the Malartic and Senneville properties in Abitibi.
