AUGYVA REPORTS HIGH-GRADE GOLD RESULTS UP TO 70.6 g/t

December 21, 2006 - **Augyva Mining Resources Inc. (TSX-V: AUV) (the "Company")** is pleased to announce further high-grade grab sample results in gold, and highly anomalous soil samples results on its Yasinski property in James Bay. Grab samples were collected in metasediments. The field observation prospecting work indicates that metasediments are over (30) metres thick and several hundreds of metres of strike length in both direction (North-East and South-West). All analyses were carried out by ALS Chemex in Val d'Or, Quebec, an internationally recognized assayer.

"I am very encouraged by the consistently high-grade gold results in grab samples found in the Yasinski metasediments," said Georges-Yvan Gagnon, President and CEO of Augyva. The Management of Augyva is very pleased with these results and other assay results are still pending for Yasinski and Kali properties from samples collected this summer and fall.

In November, VTEM airborne geophysical surveys have been flown by Geotech Ltd of Aurora, for 914 line-kilometres over the Kali property, in the Opinaca region in James Bay, and for 875 line-kms over the Yasinski property. These surveys were undertaken to delineate new sulphide and gold targets on both properties. Maps and reports should be available in February.

In December, a gravity survey has been performed by Abitibi Géophysique of Val d'Or, at the Yasinski property to delineate polymetallic targets under the hydroelectric power line. Maps and reports should be available by the end of January.

This press release was prepared by geologist Georges-Yvan Gagnon, who is a Qualified Person as defined by NI 43-101.

Augyva Mining Resources is a mineral exploration company with five properties located in James Bay and in Abitibi, Quebec.
